

AI Automation

Monday, November 17, 2025 11:41 AM

AI Automation:

Software performing simple, repetitive task based strictly on the rules the developer set.

Watchman need to open the door when cars come and close it when car go.

Features:

- 1- Predictable
- 2- Doesn't learn or adapt.

Example:

- Automatic sending pricing email when someone fills a form.
- LinkedIn Post Scheduling.
- Alexa automating turning on light at specific time.

AI Agent:

AI Agent capable of decision-making, learning from experience, and adapting on the fly.

Features:

- 1- Decision Making
- 2- Interactive

Examples:

- Smart Assistant = Siri/Google Assistant answering questions, setting reminders, booking reservations.
- Self Driving Car = Decides routes, learn from past driving.

Main Difference between AI Automation and AI Agents:

- 1- Thinking
- 2- Learning
- 3- Interaction
